

# ShopSmart: Your Digital Grocery Store Experience

---

## Introduction

**ShopSmart** is a full-stack digital grocery store application built using **React.js**, **Node.js**, **Express.js**, and **MongoDB**. This project aims to simplify and enhance the online grocery shopping experience for both customers and sellers.

Customers can easily browse through product categories, view item details, manage their shopping cart, and securely place orders—all from the comfort of their homes. Sellers and administrators can efficiently manage product listings, inventory, and order processing through a dedicated backend interface.

Designed with user-friendliness, performance, and security in mind, ShopSmart offers a responsive and intuitive interface, robust backend logic, and secure database integration, making it a complete solution for running a modern grocery e-commerce platform.
